

PARAGRAPH AND INFERENCES- Analytical Reasoning

Conclusions/Inferences

Directions: Below are given two passages followed by several possible inferences which in the passages. You have to examine each inference separately in the context of the passage and decide upon its degree of truth or falsity.

Mark answer (1) if inference is “**definitely true**” i.e., it properly follows from the statement of facts given.

Mark answer (2) if inference is “**probably true**” though not “**definitely true**” in the light of the facts given.

Mark answer (3) if the “**Data are inadequate**”, i.e., from the fact given you cannot say whether the inference is likely to be true or false.

Mark answer (4) if inference is “**probably false**” though not “**definitely false**” in the light of the facts given.

Mark answer (5) if inference is “**definitely false**”, i.e., it cannot possibly be drawn from the facts given or it contradicts the given facts.

PASSAGE I

Logically these are rules of conduct. Every country has laid down comprehensive series of practical rules for citizens for resolving mutual contradictory rights and interests. Most of these rules have been laid down to sustain social activities. For instance, many countries have laid down rules to protest against such unsocial activities as theft, attack and murder. These rules are backed by judicial system and executory institutions, which look after the people who obey the rules and also who violate the rules. Wherever the human behaviour is involved such rules are not only for namesake there but are necessary also.

1. There is no need to have any machinery to ensure strict adherence to the rules by citizens.

Ans: (5) According to passage, the inference is definitely false.

2. There is no need of any rules if individuals do not have to interact with each other.

Ans: (5) According to passage, the inference is definitely false.

3. Humans beings are susceptible to violate rules.

PARAGRAPH AND INFERENCES- Analytical Reasoning

Ans: (1) According to passage, the inference is definitely true.

4. Without rules, human behaviour degenerates into anarchy.

Ans: (1) According to passage, the inference is definitely true.

5. There are no rules in countries where citizens' interests and rights do not contradict.

Ans: (3) According to passage, the "Data are inadequate".

PASSAGE II

In the initial years, trade policy in our country was primarily aimed at regulating imports having regards to the nascent stage of country's development and the need to encourage domestic production through import substitution measures. However, with the onset of liberalisation the importance of globalisation through trade and making exports the engine of growth of economy has been recognised. Export promotion is now a continuous and sustained effort and specific steps in this direction have been taken and achievements have been made in recent years.

6. Achievements made in the economic growth are attributable to maximum possible export and minimum or almost negligible import.

Ans: (5) According to passage, the inference is definitely false.

7. At present, there are no regulatory clutches on the export as export is recognised as the main force behind economic growth.

Ans: (3) According to passage, the "Data are inadequate".

8. It is not appropriate to give the credit of economic growth to export.

Ans: (4) According to the passage, the inference is "definitely false".

9. Before the implementation of the idea of liberalisation, our trade policy was not much in favour of free import-export.

Ans: (5) According to passage, the inference is definitely false.

10. Import used to affect domestic production in earlier years.

PARAGRAPH AND INFERENCES- Analytical Reasoning

Ans: (1) According to passage, the inference is “definitely true”.

Passage III

Long term economic progress comes mainly from the invention and spread of improved technologies. The scientific revolution was made possible by the printing press, the industrial revolution by the steam engine and India's escape from famine by increased farm yields, the so called 'Green Revolution'. Right now rich countries are changing the world's climate by emitting billions of tonnes of carbon dioxide each year from the use of coal, oil and natural gas. In future years China and India will make massive contributions to increased carbon dioxide in the atmosphere. Yet no country rich or poor, is keen to cut its energy use, owing to concern that to do so would threaten jobs, incomes and economic growth. New technologies will provide a key part of the solution. Already, 'hybrid' automobiles, which combine gasoline and battery power, can roughly double fuel efficiency cutting carbon dioxide emissions by half. Similarly, engineers have developed ways to capture the carbon dioxide that results from burning coal in power plants and store it safely underground. The new technology called "carbon capture and sequestration" can cut 80%, of the carbon dioxide emitted during the production of electricity.

11. It may not be practically possible to switch over to the new hybrid technologies from the present ones.

Ans: (5) The inference is definitely false. Any new technology is developed keeping in view its viability and acceptance.

12. In the forthcoming years, India and China are going to be at the top of the list of world's developed countries.

Ans: (5) Emission of huge quantity of carbon dioxide is not a parameter for being developed countries.

13. The more developed is a country; less is the contribution to increase air pollution.

Ans: (5) The inference is definitely false.

14. The new technologies can control emission of carbon dioxide caused only during electricity generation.

Ans: (5) From the passage it is clear that new technologies are being developed to reduce emission of carbon dioxide from automobiles and during the production of electricity.

PARAGRAPH AND INFERENCES- Analytical Reasoning

15. The developing countries in the world are trying to evolve new technologies to reduce the emission of carbon dioxide.

Ans: (2) Probably true. It is not mentioned in the passage if the countries trying to evolve new technologies are developed or developing. So it may be the developed as well as the developing countries that are trying to evolve new technologies to reduce the emission of carbon dioxide.

Passage IV

The immediate challenge is on the food front. Shortfalls in production have been allowed to affect supplies and hence prices. The Government is planning to focus on investment in irrigation and even revival of agricultural extension system. What is probably needed is a fresh dose of Green Revolution strategy. It appears that the Green Revolution instruments to encourage farmers to invest are no longer effective. The green Revolution strategy was based on the state taking out the risk of collapse in prices. Farmers were offered remunerative prices and a guaranteed procurement of their produce in case the open market could not absorb it. Farmers could then borrow from banks, acquire the Green Revolution Technology and produce as much as they could. The pressure on the food subsidy was manageable as long as there was a food shortage. Prices in the open market then tended to be above the procurement price. But with the food surpluses the situation has changed. The situation was unsustainable not merely because of the magnitude of this subsidy. It was also inefficient. It meant farmers were being led to produce crops based just on the prices Government fixed and not in relation to any real demand. In these circumstances, the Government was reluctant to keep increasing procurement prices at the pace that used to be the norm in earlier years.

16. The government is planning to make crucial changes in the Green Revolution strategies.

Ans: (1) Consider the following line of the passage:

“The Government is planning to focus on investment in irrigation and even revival of agriculture extension system what is probably needed is a fresh dose of Green Revolution Strategy.”

Hence, inference is definitely true.

17. The Government is no longer in a position to provide subsidy to farmers.

Ans: (2) From the passage it seems that the inference is probably true.

18. As the open market prices are lower, all the burden of procurement of crops is on the Government.

Ans: (5) According to passage, the inference is definitely false.

PARAGRAPH AND INFERENCES- Analytical Reasoning

19. Demand is much higher than the quantity of crops produced by the farmers.

Ans: (5) Consider the following line of the passage:

“But with the food surpluses the situation has changed.”

20. The farmers tend to produce the crops as per their convenience and not consonant with the demand.

Ans: (1) Consider the following line of the passage:

“It meant farmers were being led to produce crops based just on the prices Government fixed and not in relation to any real demand.”

Passage-V

One of the promising features of the current market is that domestic institutions seem to have turned buyers after a very long time. They have been net buyers this month with inflows exceeding by Rs.80 crore till early this month. That's admittedly a small amount, but its significance lies in the fact that domestic institutions have been net sellers every month this financial year except in September when their net purchases amounted to a microscopic Rs. 28 crore. This financial year's net sales by domestic institutions amounted to Rs. 2964 crore, which has substantially offset the net inflows of Rs. 3187 crore by FIIs. The net purchases by domestic institutions could indicate that money is once again flowing into equity funds, eager not to miss the widely expected rally. Part of this reason could be a shift in investor portfolios, as people lighten up on debt and put that money into equity.

21. Domestic institutions have been consistently selling only in all the months in this financial year.

Ans: (5) According to passage, the inference is definitely false.

22. FIIs bought more than what was sold by domestic institutions this financial year.

Ans: (1) According to passage, the inference is definitely true.

23. The equity market is expected to experience a subdued activity in near future.

Ans: (5) According to passage, the inference is definitely false.

24. The activities in equity market have direct relationship with the debt market.

PARAGRAPH AND INFERENCES- Analytical Reasoning

Ans: (2) According to passage, the inference is probably true.

25. It is expected that in the early next financial year the gap between the net sales and net purchases will reduce substantially.

Ans: (1) According to passage, the inference is definitely true.

PASSAGE VI

A recent report that satellite data shows groundwater levels in northern India depleting by as much as a foot per year, over the past decade, is a matter of concern. The clear writing on the wall is that India faces a turbulent water future and veritable crisis without proactive policy and sustainable practices. Besides the poor monsoon this season and the resultant drought situation pan-India calls for sustained policy focus on the water economy. A whole series of glaring anomalies do need to be addressed. For one, there's far too much reliance on groundwater. For another our water infrastructure for storage and supply is sorely inadequate. Worse, policy distortions in artificially under-pricing key agri-inputs like power have perversely incentivised cultivation of water intensive crops like paddy in-traditionally wheat growing areas.

26. India has failed to take measures to recharge groundwater adequately in northern part.

Ans: (1) It is clear from the passage that India has failed to take measures to recharge groundwater adequately in northern part. Therefore, the inference is definitely true.

27. Wheat cultivation in India requires comparatively more water than paddy.

Ans: (5) It is clearly mentioned in the passage that the paddy is water intensive crop.

28. Water level in other parts of India was stable during the last decade.

Ans: (3) There is no data about the water level in other parts of India.

29. India has now put in place a system to reduce over dependence on ground water for cultivation and thus preserve balance.

Ans: (4) The inference seems to be false.

30. Adequate monsoon helps in drawing less ground water for cultivation and thus preserve balance.

PARAGRAPH AND INFERENCES- Analytical Reasoning

Ans: (2) It can be stated that the inference is probably true on the basis of facts mentioned in the passage.
