Percentage Part 1

Assignment with Solutions

www.ixamBee.com

1. If A is 25% more than B, then B is how much percent less than A?

- 1) 20%
- 2) 16.66%
- 3) 15%
- 4) 12%
- 5) 33.33%

Answer:- 1) 20%

2. Price of a shirt is 60% less than that of price of a trouser. Price of trouser is how much percent more than that of price of shirt?

- 1) 350%
- 2) 450%
- 3) 250%
- 4) 150%
- 5) None of these

Answer: - 4) 150%

3. If Price of rice rises by 20%, then by how much percent should the consumption of Rice be reduced so that the expenditure does not change?

- 1) 10%
- 2) 9.09%
- 3) 16.66%
- 4) 12%
- 5) 18%

Answer:- 3) 16.66%

4. If the length of rectangle decreases by 25%, then by how much % breadth must be increased so that there is no effect on its area?

- 1) 20%
- 2) 25%
- 3) 16.66%
- 4) 33.33%
- 5) 12%

Answer: 4) 33.33%

5. Length of the rectangle is increases by 10% and the width is decreases by 20% what will be the effective change in area?

- 1) 25% increase
- 2) 12% decrease
- 3) 30% increase
- 4) 20% increase
- 5) 40% decrease

Answer: 2) 12% decrease

6. Length of the cuboid is increases by 20% and the width is increases by 10% and height is decreases by 25% what will be the effective change in volume?

- 1) 5% increase
- 2) 2% decrease
- 3) 6% increase
- 4) 0% increase
- 5) 1% decrease

Answer: 5) 1% decrease.

7. Two numbers are respectively 20% and 50% more than a third number. First number is how much % less than the second number?

- 1) 25%
- 2) 20%
- 3) 10%
- 4) 30%
- 5) None of these

Answer: - 2) 20%

8. Two numbers are respectively 20% and 40% less than a third number. What % of first number is the second number?

- 1) 65%
- 2) 45%
- 3) 75%
- 4) 60%
- 5) None of these

Answer: 3) 75%

9. If 10% of a number is subtracted from the number itself then we get 360, what will be the new number if 20% of the number is added to number?

- 1) 320
- 2) 380
- 3) 400
- 4) 420
- 5) 480

Answer: 3) 400

10. If 66 is subtracted from the number it becomes 83.33% of itself, what will be the new if 10% of the number added to the it.

- 1) 314.5
- 2) 435.6
- 3) 310.6
- 4) 407.3
- 5) 506.8

Answer: 2) 435.6

11. The price of sugar is decrease by 10% due to this a family purchase 8kg more sugar for Rs. 720, then find the original consumption?

- 1) 70
- 2) 72
- 3) 75
- 4) 48
- 5) 50

Answer: 2) 72

12. The price of sugar is decrease by 10% due to this a family purchase 8kg more sugar for Rs. 720, then find the current consumption?

- 1) 70
- 2) 72
- 3) 75
- 4) 80
- 5) 50

Answer: 2) 72

13. The price of Rice is increase by 20% due to this a family purchase 5kg less sugar for Rs.250, then find the current price?

- 1) 8 Rs/kg
- 2) 10 Rs/kg
- 3) 15 Rs/kg
- 4) 12 Rs/kg
- 5) 14 Rs/kg

Answer: 2) 10 Rs/kg

14. A's income exceeds that of B's by Rs.400 and B's income is 30% less than that of C's. If the total income of all of them put together is Rs.2,320, what is the income of C?

- 1) Rs. 800
- 2) Rs.650
- 3) Rs. 750
- 4) Rs.300
- 5) None of these

Answer: 1) Rs. 800

15.. The price of a T.V. Set is decreased by 30% and hence the sale is increased by 30%. What will be the effect on the total revenue of the shop?

- 1) 5% decrease
- 2) 4.5% increase
- 3) 9%decrease
- 4) 10% decrease
- 5) None of these

Answer: 3) 9%decrease

Solution

Solution:1-

Let B = 100, then A = $100 + (25\% \text{ of } 100) = 100 + 25 = 125$

So % required = $25/125 \times 100 = 20\%$

Solution:2 -

Let, the Price of Trouser = Rs.100

∴ The price of Shirt = Rs. 40

∴ Reqd. % = $60/40 \times 100 = 150\%$

Solution:3-

Let price increases from = 100: 120 = 5:6

So consumption will decrease inversely = 6:5

Hence % decrease in consumption = $(6-5)/6 \times 100 = 1/6 \times 100 = 16.66\%$

Solution:4-

Let length of a rectangle changes from = 100 to 75 = 4:3

Hence breadth will increase inversely = 3 :4

Hence % increase in breadth = $(4-3)/3 \times 100 = (1/3) \times 100 = 33.33\%$

Solution:5-

$10\% = \frac{1}{10} \Rightarrow$ original length is 10, new length will be 11

$20\% = \frac{1}{5} \Rightarrow$ original width is 5, new width will be 4

Original area = length $\times$ width $\Rightarrow 10 \times 5 = 50$

New area = length $\times$ width $\Rightarrow 11 \times 4 = 44$

Change will be $6/50 \Rightarrow 12\%$ decrease.

Solution:6 - We know that the formula of cuboid volume is $= L \times B \times H$

$20\% = 1/5 \Rightarrow$ original length is 5, new length will be 6

$10\% = 1/10 \Rightarrow$ original width is 10, new width will be 11

$25\% = 1/4 \Rightarrow$ original height is 4, new height will be 3

Original volume = length $\times$ width $\times$ height $\Rightarrow 10 \times 5 \times 4 = 200$

New Volume = length $\times$ width $\times$ height $\Rightarrow 11 \times 6 \times 3 = 198$

Change will be $2/200 \Rightarrow 1\%$ decrease.

Solution:7-

Let, 3rd no. = 100

then, 1st no. = 120

and 2nd no. = 150

$\therefore \text{Reqd. \%} = \frac{150 - 120}{150} \times 100 = 20\%$

Solution:8-

Let, 3rd no. = 100

then 1st no. = 80

and 2nd no. = 60

$\therefore \text{Reqd. \%} = \frac{60}{80} \times 100 = 75\%$

Solution:9-

$10\% = 1/10$, let original number is 10

Then 10% subtraction we get $10 - 1 = 9$ and we have $9 = 360$

$1 = 40$, then original number will be $\Rightarrow 400$

Here we have 20% increase in price so it means $20\% = 1/5 \Rightarrow 6/5$

Then the new price will be $= 400 \times (6/5) \Rightarrow 480$

Solution:10 –

$$83.33\% = 5/6 \Rightarrow 6x - 66 = 5x \Rightarrow x = 66,$$

Then original number will be = $6x = 396$

$$10\% \text{ of } 396 \text{ is } \Rightarrow 39.6$$

Then new number will be $\Rightarrow 396 + 39.6 \Rightarrow 435.6$ ans.

Solution:11-

As we discussed in the video ratio of price and quantity will be

In reverse ratio, if expenditure is same.

Here we have 10% decrease in price so it means $10\% = 1/10 \Rightarrow 9/10$

$$\text{Price} = 10 \quad 9$$

$$\text{Quantity} = 9 \quad 10 \text{ so } 1 = 8$$

Then original consumption will be $9 = 72$ kg Ans.

Solution:12-

As we discussed in the video ratio of price and quantity will be

In reverse ratio, if expenditure is same.

Here we have 10% decrease in price so it means $10\% = 1/10 \Rightarrow 9/10$

$$\text{Price} = 10 \quad 9$$

$$\text{Quantity} = 9 \quad 10 \text{ so } 1 = 8$$

Then original consumption will be $10 = 80$ kg Ans

Solution: 13-

As we discussed in the video ratio of price and quantity will be

In reverse ratio, if expenditure is same.

Here we have 20% increase in price so it means $20\% = \frac{1}{5} \Rightarrow \frac{6}{5}$

Price = 5 6

Quantity = 6 5 so $1 = 5$

Then current consumption will be $5 = 25$ kg

Then the current price will be $25 = 250 \Rightarrow 10$ Rs/kg.

Solution:14 -

Let, C's Income = Rs. x

$\therefore$ B's Income = 70 % of Rs. x = Rs. $0.7x$

$\therefore$ A's Income = Rs. $0.7x$ + Rs. 400

$\therefore$ Rs. x + Rs. $0.7x$ + Rs. $0.7x$ + Rs. 400 = Rs.2,320

$\Rightarrow 2.4x = \text{Rs.}1,920$

$\therefore x = \frac{1920}{2.4} = \text{Rs.}800$

Solution:15

Let, the original price of T.V Set = Rs.100

$\therefore$ Now, price of the T.V Set = Rs. $100 \times 70\% \times 130\% = \text{Rs. } 91$

$\therefore$ Reqd. % = $100 - 91 = 9\%$ decrease
