

Prepare 50% Faster

Percentage Part 3

Assignment with Solutions

1. The population of a town is 15400. $\frac{4}{7}$ of them are males and rest females. 50% males are married, find the % of female married?

- 1) 71.5%
- 2) 60.45%
- 3) 62.5%
- 4) 66.6%
- 5) 72.45%

Ans: 4) 66.6%

2. The population of town at present is 6000. If males are increased by 8% and females are increased by 13%. Then population will become 6600 after 1 year. Find the number of males at present.

- 1) 2400
- 2) 3600
- 3) 4000
- 4) 3500
- 5) 2000

Ans: 2) 3600

3. The population of town at present is 8000. If males are increased by 20% and females are increased by 15%. Then the population will become 9440 after 1 year. Find the number of females at present.

- 1) 2400
- 2) 3200
- 3) 4000
- 4) 3500
- 5) 2000

Ans: 2) 3200

4. A person spend 20% of his income on the food, 50% of the remaining amount spends on rent and 15% of the remaining amount on clothing and saves Rs 1700 find the total income.

- 1) 5500
- 2) 4500
- 3) 5000
- 4) 6000
- 5) 8000

Ans: 3) 5000

5. A person spends 10% of his income on house rent, 25% of the remaining money spends on food, and 30% of the remaining money on travelling and saves Rs. 25200. Find his income.

- 1) 55000
- 2) 45000
- 3) 50000
- 4) 40000
- 5) 80000

Ans: 4) 40000

6. A person spends 12.5% of his income on rent, 16.66% of the remaining money spends on shoes, and 11.11% of the remaining money on travelling and saves Rs. 25200. Find the total income.

- 1) 8640
- 2) 6850
- 3) 4560
- 4) 7560
- 5) 8200

Ans: 1) 8640

7. In an examination having total 150 questions, in the first section having 100 questions. A student got 45% marks in first section, but he got 51% marks in the second section. Find the total percentage of marks in the examination.

- 1) 46%
- 2) 48%
- 3) 50%
- 4) 47%
- 5) 50.5%

Ans: 4) 47%

8. In an examination having total 300 questions, in the first section having 180 questions. A student got 75% marks in first section, but he got 83% marks in the second section. Find the total percentage of marks in the examination.

- 1) 76%
- 2) 78%
- 3) 80%
- 4) 77%
- 5) 78.2%

Ans: -5) 78.2%

9. In an examination, there are 200 questions, in the first section, out of 150 questions, a student got 65% marks, then how much percent he has to score in remaining questions, so that he will score overall 70% marks?

- 1) 80%
- 2) 70%
- 3) 75%
- 4) 85%
- 5) 90%

Ans: 4) 85%

10. In an examination, there are 400 questions, in the first section, out of 300 questions, a student got 50% marks, then how much percent he has to score in remaining questions, so that he will score overall 55% marks?

- 1) 80%

2) 70%

3) 75%

4) 85%

5) 90%

Ans: 2) 70%

11. In an examination having total 100 questions, in the first section having 60 questions. A student got 50% marks in first section, but he got 65% marks in the second section. Find the total percentage of marks in the examination.

1) 46%

2) 48%

3) 56%

4) 47%

5) 50.5%

Ans: 3) 56%

12. If income tax is decreased by 10%, then net income increased by 40%. Find the rate of income tax.

1) 50%

2) 80%

3) 40%

4) 60%

5) 70%

Ans: 2) 80%

13. If income tax is decreased by 20%, then net income increased by 50%. Find the rate of income tax.

1) 50%

2) 80%

3) 40%

4) 60%

5) 70%

Ans: 5) 70%

14. When income of a man increases by Rs. 5000 then tax rate reduces from 15% to 12%. While in both the situation 20% income is tax free. Find his initial income if he paid equal tax in both cases.

1) 15000

2) 25000

3) 30000

4) 20000

5) 40000

Ans: 4) 20000

15. When income of a man increases by Rs. 8000 then tax rate reduces from 10% to 5%. While in both the situation 10% income is tax free. Find his initial income if he paid equal tax in both cases.

1) 8500

2) 6500

3) 7000

4) 8000

5) 9000

Ans: 4) 8000

Solution

Solution:1 - Total population is 7 there are 4 males and 3 will be females

50% of the male are married means 2 Males are married

If 2 males are married then also 2 females will be married

% Married females will be $\Rightarrow 2/3 \Rightarrow 66.66\%$

Solution:2 - males is increases by 8% while women is increases by 13%

Total 600 /6000 => 10% now use Alligation

Men	Women
8%	13%

10%

3%

2%

then here the ration men: women = 3:2

5 = 6000, then number of males will be 3 => 3600 answers.

Solution:3 - males is increases by 20% while women is increases by 15%

Total 1440 /8000 => 18% now use Alligation

Men	Women
20%	15%

18%

3%

2%

then here the ration men: women = 3:2

5 = 8000,

then number of females will be 2 => 3200 answers.

Solution:4 - We can solve this question with basic method which is find the expenditure on the previous amount and then subtract and further and then equate with given amount. But we will solve this question one liner method which we have already discussed in the video,

Let the income of person is X

$$x \times 80/100 \times 50/100 \times 85/100 = 1700$$

On solving the value of X = 5000. Which is required answer.

Solution:5 - We can solve this question with basic method which is find the expenditure on the previous amount and then subtract and further and then equate with given amount. But we will solve this question one liner method which we have already discussed in the video,

Let the income of person is X

$$x \times 90/100 \times 75/100 \times 70/100 = 25200$$

On solving the value of X = 40000

Solution:6 - We can solve this question with basic method which is find the expenditure on the previous amount and then subtract and further and then equate with given amount. But we will solve this question one liner method which we have already discussed in the video,

Let the income of person is X and we must remember the fraction of %

$$x \times 7/8 \times 5/6 \times 8/9 = 5600$$

On solving the value of X = 8640Ans.

Solution:7 - As we have discussed in the video concept and tricks as well

Total number of questions 150, in first section there are 100

So, in second section will be 50 questions

we will solve this by trick

$$45\% + (6\% \times 50)/150 = 45\% + 2\% \Rightarrow 47\% \text{ Ans.}$$

Solution:8 - As we have discussed in the video concept and tricks as well

Total number of questions 300, in first section there are 180

So, in second section will be 120 questions

we will solve this by trick

$$75\% + (8\% \times 120)/300 = 75\% + 2\% \Rightarrow 77\% \text{ Ans.}$$

Solution:9 - We will solve this question with trick

Total question 200 question in the first section 150 question so in

Second section the number of questions will be 50.

Which is $70\% + (5\% \times 150)/50 \Rightarrow 85\%$ Ans.

Solution:10 - We will solve this question with trick

Total question 400 question in the first section 300 question so in

Second section the number of questions will be 100.

Which is $55\% + (5\% \times 300)/100 \Rightarrow 70\%$ Ans.

Solution:11 - As we have discussed in the video concept and tricks as well

Total number of questions 100, in first section there are 60

So, in second section will be 40 questions

we will solve this by trick

$50\% + (15\% \times 40)/100 = 50\% + 6\% \Rightarrow 56\%$ Ans

Solution:12 - we know that Total income = Net income + income tax

And we know that $\text{Income tax} \times 1/10 = \text{net income} \times 2/5$

$10\% = 1/10$ and $40\% = 2/5$

$\text{Income tax} / \text{net income} = 4/1$

Total income = 5 $\Rightarrow$ income tax rate = $4/5 \Rightarrow 80\%$

Solution:13 - we know that Total income = Net income + income tax

And we know that $\text{Income tax} \times 1/5 = \text{net income} \times 1/2$

$20\% = 1/5$ and $50\% = 1/2$

$\text{Income tax} / \text{net income} = 5/2$

Total income = 7 $\Rightarrow$ income tax rate = $5/7 \Rightarrow 70\%$ approx.

Solution:14 - Let the initial income is x after increase of 5000 it will be x+5000

$x \times 80/100 \times 15/100 = (x+5000) \times 80/100 \times 12/100$

On solving we get = x $\Rightarrow$ 20000 ans.

Solution:15 - Let the initial income is x after increase of 8000 it will be x+8000

$$x \times 90/100 \times 10/100 = (x+8000) \times 90/100 \times 5/100$$

On solving we get = x => 8000 ans.
